

t.SSI - Software-Sicherheit

Person responsible for the course: Marc Rennhard, rema

Credits: 4

Valid for: 2011/2012

Last saved: 05.01.2012 20:30

Learning objectives:

The students get a profound introduction to software security. The focus is in the areas "secure software development process", "security-testing of software and systems", and "secure software development with Java". In particular, the students will learn the following competencies:

- You know and understand what must be considered during secure software development.
 - You can apply the principles of secure software development to an arbitrary software development process to turn it into a secure software development process.
 - Using appropriate methods and tools, you can test applications and systems with respect to security and exploit uncovered vulnerabilities.
 - You know typical, security-critical programming errors that are often made and know how you can prevent them in your own programs.
 - You know and understand the security features offered by the Java platform and can apply them to implement a security design or security controls in a reasonable way.
-

Course content:

Lecture:

Secure software development process (12 lessons)

- Introduction to software security
- The secure development lifecycle
- Security Design Principles / Controls
- Security Requirements Engineering and Threat Modeling
- Security Risk Analysis

Security-testing (5 lessons)

- Finding and exploiting vulnerabilities in web applications- Security-Testing Tools: Static Code Analysis and vulnerability scanners
- Penetration testing

Secure programming with a focus on Java (11 lessons)

- Typical programming errors (buffer-overflows, race conditions...)
 - Java security libraries (JCA, JCE, JSSE)
 - Secure programming of web applications with Java (input validation, access control...)
-

Lab:

You will work on practical problems corresponding to all major topics of the lecture. The tasks are a mix of security analysis, security design, security-testing and secure programming with Java.

Previous knowledge:

SWE (Software Engineering) and ISI (Internet-Sicherheit) recommended

Teaching method:

Type of lesson:	Number of lessons per week:
Lecture	14 * 2
Tutorial/Practicum	14 * 2
Group teaching	
Block instruction	
Seminar	

Assessment:

According to the table or as specified in writing by the lecture at the beginning of the semester!

Number	Type	Weighting
	Modulendprüfung	80%
	Prüfungen während der Unterrichtszeit	
	Bewertete Praktika	20%

Language of instruction:

Deutsch

Instruction material:

Lecture slides with additional comments

Comments:
